Overview From The Director Of Business Development

2013 was indeed a record year for Sold Secure, and the good news is that 2014 is looking like it'll be very close behind it in terms of performance.

Workload continued to be huge with turnover maintained at a high level and more importantly the ability to provide funds to the MLA improved.

New products were consistently submitted for approval, proof of the esteem in which Sold Secure approval is held, and importantly the pull that comes from insurers, who want to maximise security in order to minimise their risks. Proof of this came with the publication at the very end of 2014 of the "Physical Security for Homes: Guidance for Occupiers" document from the RISC Authority, something that is covered in more detail in the next few pages. Suffice it to say it's great to see the promotion coming from the insurance industry.

Annual audits; a vital part to any approval programme – ensuring consistency of design and production, continued at pace throughout the year, with manufacturers keen to ensure continued approval and maintain their presence on the Sold Secure website.

ISO 9001 approval was yet again maintained with flying colours, as was vigilance over abuse of the coveted Sold Secure approved logo. Policing of the logo has to be taken seriously, without it the value of the approval decreases significantly. As a registered trademark we can (and will) take legal action to protect it!

2015 is even more special for our 2 members of Staff; Steve and Lesley, as they both celebrate 10 years at the company. I'd like to take this opportunity to thank them both for their hard work and efforts over this time period.

It goes without saying that if you want to discuss getting any products tested, or simply want to find out if we can help you in any way with some consultancy then just drop us a line via the website or give us a call 01327 264687.

I sincerely hope you enjoy the 2015 Catalogue, once again integrated with the MLA Handbook, itself full of useful information on security standards and of course the list of MLA approved companies, and I look forward to continuing to work with customers, new and old over the next 12 months.

Dr Steffan George
Director of Business Development

Why get your products tested by Sold Secure?

You'll read a lot about Sold Secure in this catalogue but if you're a manufacturer why should you have your product approved? What do you actually get for your money and why choose Sold Secure over other test houses?

Firstly it's important to realise the benefit of independent third party testing. Whilst you may believe that you have the proverbial "best product in the world" and have your own test reports to prove it, but then in the eyes of the general public or customers then you would think that anyway – you want to sell product and therefore the perception may be that you'd "say anything" to sell it. However, if an independent third party, who has no vested commercial interest, says that the product has met a certain criteria, then it adds gravitas to the claims about the product.

The next thing to look at is what testing it's claimed to have met. Yes manufacturers will have their own in-house test specifications but what do these actually mean. You're better off testing to a recognised standard, something that people will understand and recognise. Yes you can test to British Standards or European Norms and in some cases then this is arguably a very well recognised standard, but does it go far enough. Do they reflect what is happening out there in the field; mimicking what thieves are doing? This is where the Sold Secure test specifications come into their own. Developed in conjunction with the relevant stakeholders (including police, insurers and the appropriate industry bodies) they are mostly based on attack test principles, using a certain amount of time and tools (depending on grade) for the product to be defeated.

So why choose Sold Secure? First and foremost there's the recognition. Sold Secure is recognised not only by the public, but most importantly by the Police Crime Prevention Design Advisors (who promote the use of Sold Secure approved products) and insurers (a number of whom will require Sold Secure Approved products to be used in order to either provide insurance or provide a discount on the insurance premium). How do we know this; first and foremost based on the number of calls and e-mails we get from insurers directly and from the public highlighting how they need

to verify approval for their insurance, and secondly from the bee-line the CPDA's make for the Sold Secure stand at any event we're at, eager to get their hands on the latest Sold Secure Approved Products catalogue.

Another major benefit of using Sold Secure, according to feedback we get from customers, is the way we work with our customers. We've heard horror stories of other test houses taking in products and then sending back a "bag of bits with a fail notice". Sold Secure prefers to work with its customers to help improve the quality of products out there in the market

place. We offer an initial free consultation to explain how the product will be attacked, look for any obvious weaknesses in the design/construction (whilst it's no guarantee that a product we pass, we feel that taking in a product for testing knowing that it's going to fail, whilst commercially perhaps more attractive in the short term, would be counterproductive for our desire to build long lasting relationships with our customers). We can also give an indication of what specification it should be submitted for and which grade it may be able to achieve.

Last and by no means least there's the extra marketing support that can be obtained by Sold Secure Approval. All products that have passed Sold Secure test specifications are included in the Approved Products Catalogue whilst all products tested are included on the website, which not only provides contact details for the customer but also the ability to include a picture and detailed description of the product too. Don't forget the Sold Secure website is linked to by many authoritative websites including the Government.

So, if you've got a product that you think is suitable and want the benefits of approval, contact Sold Secure on 01327 264687 or sales@soldsecure.com to discuss getting your products approved.

History

Sold Secure was established in 1992 by Northumbria and Essex Police who combined 2 initiatives, Sold Secure and Partnership Against Car Theft (PACT) to form Sold Secure with the help and backing of the Home Office. Sold Secure is now administered by the Master Locksmiths Association, in its premises adjacent to the MLA's Head Office just outside Daventry.

Purpose

Sold Secure provides test and assessment services of effective security products to commercial customers, the insurance industry, the Home Office, the Police and the public and is a company dedicated to reducing the risk of theft by the assessment of security products.

The scheme has close ties with a number of constabularies and insurers who provide regular information regarding the methods of theft and the tools utilised by criminals in their area. This helps to maintain an up to date specification and means security products can be assessed in the light of the risk they are likely to encounter when in use.

Organisation

Sold Secure is made up of a small team of dedicated staff. Steve Warren is Lab Manager looking after operations for the company as well as performing the majority of audit testing and managing any external testers who are brought in. Lesley Robertson, who is the Administrator, looks after all the paperwork and the accounts. Sold Secure also call on the services of Steffan George for business development and general management as well as Justin Freeman, the MLA's Technical Manager for extra technical assistance such as writing new standards for testing and signing off reports etc.

The company has its own board of directors who meet on a regular basis to ensure the running of the company is going according to plan. It's important to note that the company is a completely separate entity to the MLA, with its own staff, own legal entity, own board, separate accounts etc.

Testing, Assessment and Approval

Why Test?

Security product manufacturers make various claims with regards to the security of their products, but what do these claims actually mean? By developing relevant

test specifications with the involvement of the relevant stakeholders (e.g. Police, Insurance, Industry Bodies etc), as well as adopting relevant BS/EN test norms where appropriate, Sold Secure can test all products to these standards and provide the public with an understanding of how that product performs against the standard, as well as against any competitor products.

One of the main drivers for product testing is insurance recognition and recommendation. Many insurance companies understand the benefits of specifying Sold Secure products in reducing the likelihood of theft and the subsequent claim and will actively encourage their customers to use the products by giving discounts on policies where Sold Secure products are used or in some instances insisting that Sold Secure approved products are used in order to provide cover at all. The police also recommend Sold Secure products with Crime Reduction Officers particularly vocal in their recommendation and always making a beeline for the Sold Secure stand at any exhibition to get their latest copy of the Sold Secure Approved Products catalogue.

The Association of Chief Police Officers own accreditation company Secured by Design also recognize the benefits of Sold Secure testing and use the approval as part of their accreditation process, thereby pointing a number of manufacturers our way for the attack testing to give SBD confirmation of the integrity of the product.

Manufacturers and suppliers can apply to have their products approved by Sold Secure. Products which have been satisfactorily assessed may bear the Sold Secure Quality Mark.

The tests are carried out to strict criteria set out in Attack Specifications drawn up in conjunction with interested parties, such as insurers, police forces as well as industry specific organisations such as the Caravan Club for example. It's important to note that the interested parties do not include manufacturers, which allows Sold Secure to be independent of any vested interests.

The testing is carried out in-house with a team

of approved testers, all of whom are Master Locksmiths in their own right or experts in their field. By using this highly experienced team of testers it is possible not only to ensure continuity but also to act as a "worse case" type scenario due to the significant product knowledge and attack methods knowledge held by the group.

As well as testing to the Sold Secure standards, testing can also be carried out to a range of European Standards, such as EN14450 for safe testing for example. Also, some of the Sold Secure specs refer to European norms such as EN12209 & EN1303.

Sold Secure differentiates itself from its competitors by helping the manufacturers understand the testing involved and how to improve their products. They always suggest that when a customer has a new product they're thinking of getting approved they bring it for an initial consultation where they can evaluate the product and what category and level we feel it should be aimed at. We can also provide some up front consultancy on any areas of weakness we may find, thereby saving the manufacturer what could otherwise be a costly test. Whilst commercially Sold Secure may make more money by testing something it immediately knows will fail, they quite rightly feel that it makes far better long term business sense to build relationships with our customers and help them improve their products and ensure they retain them as customers.

Approval Categories

As you will see from the information below there are several categories that Sold Secure test to and each category uses one of three levels of resistance, Gold

Silver and Bronze, excluding the caravan and tracker categories which have an additional Diamond level of attack resistance.

The attack specifications vary for each category in the types of attack and tools used in the test. Higher value products have much tougher tests than lower value products where the attack is less likely to be planned or the thief well equipped. For example bicycle attacks are carried out using lighter tools and no power drills as the theft is more likely to be opportunistic rather than planned. Caravan security devices however will need to withstand attacks using drills and large pry bars, amongst other things as they are more likely to be planned and executed by more professional thieves due to the value of the item.

Motor Cycles & Motor Scooters

Around 50,000 motorcycles are stolen in this country every year. Many of these are broken down for spares and less than a quarter are ever recovered. A very high percentage of those stolen are actually taken from outside their owners' homes. It may be interesting to note that a bike parked in a busy main road may sport several security devices but when parked at home the bike may be left unsecure.

Sold Secure has a single level of Motorcycle Security Approval (Gold) and two levels of Motor Scooter security (Gold & Silver). Using a toolkit based on insurance and police information, the motorcycle is proven safe from the average thief. There are a number of options for security at home and also when parked away from home.

Bicycles

Sold Secure has developed a three tier security grading system. The Gold rated locking devices offer the highest level of security. The next level down Silver offers a compromise between security and cost, whilst the Bronze level typically offers defence against the opportunist thief. Thus the purchaser can choose the system which best meets his needs or the relevant insurance requirements. Again there are a number of options for mobile use and some solutions for the home environment. A number of bicycles are stolen from insecure garden sheds or garages and we have tested ground anchors, shackles and security posts to help in this area. Also see our new category for domestic buildings.

Caravans

Recent statistics show that over 5000 caravans are stolen every year and very few are recovered. Indeed according to Home Office resources caravans stolen from the UK have been found as far away as New Zealand! Once again, Sold Secure approves locking systems using the tools that a typical thief would carry. There are three levels of security approval. The Silver level offers basic security, a cost effective product for the occasions when a caravan is stored in a good location. When a higher level of security is required, then the products approved to the Gold standard are available. The Diamond level is the highest of all and offers maximum protection. Ground anchors and security posts are available for fixed security at the caravan's main storage point.

Tracking units are becoming more and more popular for Caravans and whilst they are a passive system, monitoring location when stolen (rather than an active

system preventing theft in the first place) Sold Secure have a test specification for these products.

Ground Anchors

On many occasions, for maximum security, a simple lock is not enough. Unless your bike, motorbike, caravan, boat, trailer or motor mower is fastened down it may be possible to steal it, lock and all! The answer to this is a ground anchor. When installed in your garage, drive or car park, these provide the ideal device for securing your vehicles and other valuable outdoor equipment. Where necessary, use these with a Sold Secure Approved lock.

Security Posts

An ideal way of preventing your vehicle from being stolen from your drive or car park is the security post. These are tested to the normal Sold Secure criteria, making it difficult for the criminal to bypass the security post. They can be effective in securing several vehicles at one time. They can also be used to protect your parking place!

Cars

Crime statistics indicate that the average car thief would wish to spend no longer than 2½ minutes gaining entry to a vehicle and driving off. The Sold Secure attack test acknowledges this criteria and tests the product for a full five minutes. Thus any Car product bearing our seal of approval must improve your chances of finding your car where you left it. Such has been the success of this scheme; car manufacturers now build in security at the production line stage. With increasing reliance on electronic security for vehicles theft has turned either to burglary in order to obtain vehicle keys, or thieves have gone high tech and are using diagnostic machines to fool the vehicle into thinking the key is present and thereby driving vehicles away. Perhaps the days of the "krooklock" will be on their way back!

Commercial Vehicles

The loss of a commercial vehicle is always made worse by the theft of its contents and the disruption to your business. Sold Secure have approved a range of products designed to protect the vehicle and its cargo.

Annual Audits

As part of the Sold Secure Quality Mark products have to be resubmitted every year for an Annual Audit. The audit is an important part of maintaining the security of the products approved under the various categories, particularly when components are bought in from outside sources by the manufacturers. The Annual Audits can show up to a 25 to 30% failure rate often due to a change in specification from an outside supplier, this can include parts of a product that aren't hardened properly or made from different materials to the original sample tested at the outset, normally done to try and save cost. This provides an additional benefit to the company getting the testing done of Sold Secure performing what could effectively be described as conformity of production testing for them, an essential item as customers may not have been informed of changes to products they are buying in.

Benefits to Locksmiths & Retailers

The main benefits to locksmiths lie in the ability to sell products that have been approved to standards that are already familiar to and recognised by customers. The Caravan Club has been very active in promoting Sold Secure products and most motorcyclists also recognise the value of an approved product

Website (www.soldsecure.com)

Sold Secure's well established and highly coveted website holds a full listing of all Approved Products which is updated instantly a product either achieves approval, or alternatively lapses. This offers a major advantage over many other test houses where lists of approved products have to be created and then uploaded to their website meaning that their lists can be anything up to 3 months out of date. The Sold Secure approved products list has a direct link to a brand new database which means that as soon as the product test file is updated the info will immediately be on the website, effectively providing a "real time" Approved Product list.

The website allows everyone to see whether a product has Approved Product status. Sometimes products are not resubmitted, in which case they may still be displaying the Sold Secure logo on the packaging but no longer be approved. It also means that if someone is selling a product as Sold Secure Approved then you can tell immediately whether this claim is true. The importance of this has been proved recently with one insurer having checked to see if a particular product

was approved and when it wasn't going back to the member of the public to highlight that the relevant discount was not available to him as the product's approval had lapsed.

On the website there is also a download area where Internet users can download the Sold Secure catalogue, the MLA's Guidelines for domestic security as well as a glossary of terms. Information on these approved products is circulated by Sold Secure to crime reduction officers, insurance companies, the media, the Home Office and the public, and is available free to those who request it. The new website also highlights the MLA and suggests that MLA approved companies are used for the supply and fit of approved products. This dovetails nicely into the fact that some insurance companies stipulate that in certain instances Sold Secure approved products have to be used and fitted by an MLA locksmith. This has netted a couple of MLA member's jobs and goes to show the benefit of Sold Secure to the MLA.

If you're interested in getting a product approved then e-mail Sold Secure on sales@soldsecure.com or ring us on 01327 264687.

ACPO Secured by Design

Burglaries are a common and debilitating crime in the UK. Not only for the act of breaking, entering and stealing people's possessions, but also the way a victim feels after the event has taken place. Most feel violated and angry and some may move home as a result.

In 1989, set against a backdrop of a rising tide of burglary, the police service formed the Secured by Design initiative, with one simple aim; to persuade the building industry to adopt secure design methodology and to use products with a proven track record in defeating known criminal methods of entry. At the same time SBD became involved with the door, lock and hardware industry working on security standards.

This involvement with the door industry became even more important when, in 1995, burglary peaked at 1.77 million, with occupiers of rented accommodation suffering burglaries at a rate two and a half times that of those living in privately owned homes.

Given the impact of burglary upon the occupants in social housing the Housing Corporation (now the Housing and Communities Agency) decided to adopt Secured by Design to combat the problems specifically related to burglaries in rented accommodation.

References to the security standards contained in Secured by Design, together with the HCA's funding requirements have contributed to extremely impressive reductions in crime. By 1997 burglary had reduced to just over 1 million a year, with the Office for National Statistics reporting that burglary was now at a 27 year low, at half a million last year.

While Secured by Design cannot be entirely attributed for such a reduction in burglary a leading criminologist, Professor Martin Gill, has strongly suggested that without the influence that SBD has had in the building and fenestration industry, burglary statistics could be far worse. To prove this point further, SBD has been evaluated many times by external bodies. Importantly all of the evaluations, by independent academic institutions, have produced evidence that the use of high quality windows and doors that meet Secured by Design requirements will significantly reduce burglary.

- The Nottingham City Homes project "Secure,

Warm, Modern" recently installed Secured by Design specification windows into two high crime housing estates, the result being a 42% reduction in burglary. The programme was such a success that they are now being installed into all of their housing stock.

- Glasgow Housing Association, the largest social housing provider in Europe, has put Secured by Design at the heart of its £850m refurbishment programme which has been evaluated by Glasgow Caledonian University; the result is a significant reduction in House Breaking of 63%.
- Huddersfield University has evaluated Secured by Design developments on two separate occasions and recorded reductions in crime of up to 75%.

It is also worth mentioning that Secured by Design principles were applied by both the Olympic Delivery Authority (ODA) and the London Organising Committee for the Olympic Games to their venues as a recognised crime reduction model. The Commonwealth Games village has also been built to Secured by Design principles.

We have continued our work with the lock, window and doorset industry and work closely with the Master Locksmiths Association who are trade association members of SBD, and Sold Secure with whom we work closely to ensure that information on the latest crime trends are built into standards. We recently worked with Sold Secure to develop their Catalytic Converter theft protection standard, and also promote their SS312 Diamond standard for lock cylinders.

We also played a significant role in the introduction of a number of new standards published in 2012. TS 007; a joint DHF/GGF standard for cylinders and adopted by BSI for its own Kitemark scheme, TS 008 and 009; two new standards for letter plates and boxes published by the DHF. Also the recently published PAS 24:2012 brings door and window security together under one standard for the first time while also introducing the industry to European standards.

ACPO Secured by Design

We are also soon to publish an interpretation document produced by the SBD Test House Studies Group, intended for use by test houses to ensure that there is some parity between tests to the controversial European standards. The 'UK Police Service Secured by Design interpretive document' also forms the basis by which UKAS has granted its approval to recognise test houses that may wish to test to the European standards.

Recently Secured by Design commissioned an "Interactive Guide" to help bring to life the principles of Secured by Design and designing out crime for residential as well as commercial properties. CAD based virtual estates in which design and security flaws are shown with alternative suggestions and models overlaid provides a visual aide to construction professionals.

It is important to remember that above all else Secured by Design's objective is to reduce burglary and other associated crimes by promoting the use of high quality standards and products in developments, and over the past 23 years has made significant impact.

Pragmasis - Manufacturers of Top Quality British-Made Security Products:

Torc Ground Anchor

- Highest-approved ground anchor on the market (Sold Secure Gold in every category)
- Easy DIY or customer install with wide choice of fitting kits
- Safer Homes compliant
- 20mm Hardened Steel Fold-Flat Shackle
- Impossible to bolt-crop!
- Police Preferred Specification

Shed Shackle

- Sold Secure approved wall anchor for wooden and metal sheds
- Easy DIY or customer install
- Hardened steel shackle
- Safer Homes compliant
- Ideal for bicycle security etc.
- Modular design, popular with building developers as well as with trade and end users
- Police Preferred Specification

Protector Chains

The most comprehensive range of high-grade boron steel security chains from 11mm through to 19mm. 16mm and 19mm *Guaranteed* impossible to bolt-crop (19mm used by the MoD!). All Sold Secure approved.

Double Doofer Removable Anchor, HS1 Hasp, and...

We also make the new *Double Doofer* removable ground anchor and the new HS1 heavy duty hasp & staple (both Sold Secure approved & *Police Preferred Specification*), and the *Anti-Pinch Pin* for adapting large chains to tight spaces, and more! Trade/reseller enquiries welcome! Buy British!

Sold Secure In The Code For Sustainable New Homes

It's worth remembering that Sold Secure is recognised by the government. To demonstrate this Sold Secure is mentioned when it comes to security for cycle storage in the DCLG (Department for Communities and Local Government) Code for Sustainable Homes Technical Guide.

Code for Sustainable Homes
Technical Guide
November 2010

The aim of the cycle storage part of this document (ENE 8) is to promote the wider use of bicycles as transport by providing adequate and secure cycle storage facilities, thereby reducing the need for short car journeys and the associated CO2 emissions.

The code highlights Sold Secure (Silver level) padlocks and ground anchors should be used on/in storage areas.

ENE 8: Cycle Storage 1/25

Secure entrance lock

A permanent mortice deadlock or mortice sash lock that conforms to BS 3621:2007 can be used where the door is at least 44mm thick and is locked to the doorframe. Alternatively a 'sold secure' Silver Standard padlock with a hasp and staple that are coach bolted through the structure is deemed compliant.

Where communal cycle storage will be provided within a block of flats, the entrance must be a secure doorset and meet the requirements of clauses 21.2 to 21.6 and 21.8 to 21.13 of the 'Secured by Design' New Homes 2010' document. Note that this room should have no windows.

Secure fixing

A ground anchor certified to 'Sold Secure' Silver Standard.

Where a communal cycle store will be used, a stand must be provided to support the bike, and a secure ground anchor point for each cycle space (certificated to 'Sold Secure' Silver Standard). Alternatively a secure stand can be provided.

Secure Stand

A stand which allows both wheel and frame to be locked and must, as a minimum, be of galvanised steel bar construction (with a minimum thickness of 3mm) and have a minimum foundation depth of 300mm with a welded anchor T-bar set in concrete to prevent it being easily removed from the ground.

Secure storage

A fully enclosed structure with a secure entrance lock and/or secure fixings or secure stands depending on the situation and solution.

In individual dwellings:

- For solid enclosed structures: secure entrance lock or secure fixings(s)
- For non-solid structures: secure entrance lock and secure fixings(s)

Blocks of flats and multi-dwellings with communal storage areas:

- Communal halls and solid enclosed structures: secure entrance lock and secure fixing(s) for all cycles
- For non-solid structures: secure entrance lock and secure fixings(s)

Where an external container specifically designed for the secure storage of cycles will be provided, it must be certified to LPS 1175 SR 1.

Site Inspection Report

This is a report prepared by the Code assessor during a post construction stage assessment and provided as evidence with the assessment.

Despite numerous re-writes and updates etc. since the original document was published in 2010, ENE 8, the part relating to cycle storage (and containing the promotion of Sold Secure) remains.

So Sold Secure approved products can help ensure compliance with the code directly, or can help by providing the independent testing required for Secured by Design approval.

Sold Secure Promoted in RISC Authority Document

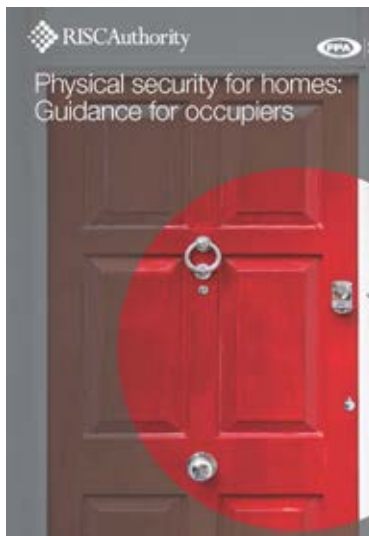

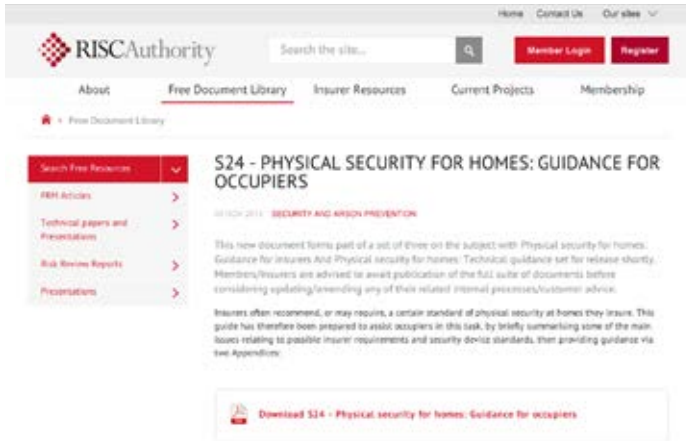

We're delighted to say that Sold Secure has cemented its position as a leading certification agency for security devices following the promotion of use of Sold Secure approved products in the recently launched Occupiers Guidance on physical security document generated by the RISC Authority

This particular guidance document forms part of a set of three on the subject of Physical security for homes, the other 2 being; Guidance for insurers And Physical security for homes: Technical guidance, both set for release shortly.

Insurers often recommend, or may require, a certain standard of physical security at homes they insure. This guide has therefore been prepared to assist occupiers in this task, by briefly summarising some of the main issues relating to possible insurer requirements and security device standards, then providing guidance via two Appendices:

SS312 Diamond is highlighted in the document as an ideal way of combatting lock snapping. Highlighting the logo to look out for and the fact that an alternative is a SS301 Bronze approved cylinder with SS301 Bronze approved door furniture

The document (available to download FOC at http://www.riscauthority.co.uk/free-document-library/search-free-resources_detail.s24-physical-security-for-homes-guidance-for-occupiers.html)

RISC Authority is an annually funded research scheme supported by a significant group of UK insurers that conducts research in support of the development and dissemination of best practice on the protection of property and business.

Sold Secure Promoted in RISC Authority Document

"Where the words 'certified' or 'approved' are used in the 'model' MSS, the terms should be considered as meaning that a security device has been proven to meet a stated standard or security approval scheme by a test body independent of the manufacturer. This is most easily ascertained by looking for products displaying common marks such as the BSI 'Kitemark' or the Secured by Design or Sold Secure"

SS312 Diamond approved cylinders highlighted as an option for combatting lock snapping

4. Compare and contrast

Compare how your current perimeter door/window compares to the advice contained in the model MSS, and consider the need for suitable door/window or security device replacement/upgrade.

5. Seek proven security

Support to suitability, buying new (make the perfect opportunity to order those products that have evidence of suitable independent third party 'certification', or other forms of 'approval', to a relevant security standard or scheme.

The most commonly used scheme for proving compliance with the provisions of a standard is the certification scheme operated by the British Standards Institution (BSI). BSI certified devices will show an impressed BSI 'Kitemark' on the security device plus, if space permits, reference to the standard passed, eg BS 3621 and the date/version of that standard. The packaging will show all the information.

Various other markologies are associated with security devices. The two most common in the domestic sphere being those of the police operated Secured by Design scheme and the MEA operated Sold Secure scheme. Whilst packaging labels might allow these other marks to logos, an impressed mark on the security device is not usually required - which can make their identification difficult.

Notes

1. Where the words 'certified' or 'approved' are used in the model MSS, the device should be considered as meaning that a security device has been proven to meet a stated standard or security approval scheme by a test body independent of the manufacturer. This is most easily ascertained by looking for products displaying common marks such as the BSI 'Kitemark' or the Secured by Design or Sold Secure logo, to

2. Other security approval schemes exist, as if in any doubt refer to your insurer.
3. There are a number of similar security devices that are not designed to a recognised security standard, so it is vital to look for suitable devices offered by reputable security manufacturers.

6. Buying complete new doors/windows

If buying new doors/windows (and you can't find ones to suit your home and particular applications, always give preference to those certified as meeting PAS 24 and which, if your door requires an emergency exit facility without use of a key (eg upper floor flats with only one physical door) have a suitable certified lock, eg BS or PAS 5521 - also noting that such doors should, if glazed, contain 'safety' glass and fitting a letter flap, have one flow with an access restrictor.

Table 2: Guide to codes used in Table 1

Mechanical Security Device Options	
<p>C ET1815:</p> <ul style="list-style-type: none"> A multi-point lock assembly 'verified' as meeting PAS 3621. <p>OR</p> <ul style="list-style-type: none"> A multi-point lock assembly having at least three locking fasteners (pins) operated by a handle secured by either: A lock cylinder 'verified' as meeting the 3 Star level of TS 007. <p>OR</p> <ul style="list-style-type: none"> A lock cylinder 'verified' as meeting BS EN 1303 at Key Security Grade 5, Attack Grade 3. A lock cylinder with two or more pins. 	<p>Example of a plastic door having a multi-point lock assembly.</p> <p>A comparable alternative to a 3 Star TS 007 cylinder is one 'approved' by Sold Secure as meeting the Diamond level of BS 3621.</p>
<p>D A multi-point lock assembly 'verified' as meeting PAS 3621.</p> <p>Caution</p> <ul style="list-style-type: none"> A PAS 3621 lock is most appropriately used at homes with only one perimeter entrance door and where emergency escape facilities have been observed necessary, eg some flats. A PAS 3621 lock provides acceptable security only if: any glazing in the door, or in any window fitted or opening adjoining either side of the door is laminated glass. any letter flap in the door, or next to it, has an access restrictor or internal motor that prevents external access, by hand or lock, to the internal lock release mechanism. 	<p>Notes</p> <ol style="list-style-type: none"> PAS 3621 locks can always be opened from the inside without using a key. If selected and used with care a more secure alternative is a PAS 3621 lock-in with both locks the internal knock handle can be locked out of use from outside when the home is left without occupants. To avoid lock-in by tripping alarms, such locks should only be fitted where a second perimeter door (which leads to safety and which does not itself have a PAS 3621 lock fitted) exists. Where a PAS 3621 or PAS 3621 lock is used it is vital, in order to maintain security, that intruders were access to the internal lock release mechanism - hence the glazing/letter flap Caution, and Being 2015 letter flap restricted hardware 'verified' as meeting security standard TS 007 are specified to become accessible - key use being restricted.
<p>E ET1815:</p> <ul style="list-style-type: none"> A mortice egress lock 'verified' as meeting BS EN 12209 at Security Grade 7. <p>OR</p> <ul style="list-style-type: none"> A mortice egress JMD lock. <p>AND</p> <p>In both cases being fitted with either:</p> <ul style="list-style-type: none"> A lock cylinder 'verified' as meeting the 3 Star level of TS 007. <p>OR</p> <ul style="list-style-type: none"> A lock cylinder certified as meeting BS EN 1303 at Key Security Grade 5, Attack Grade 2. <p>OR</p> <ul style="list-style-type: none"> A lock cylinder having five or more pins. 	<p>Example of a JMD lock this one ready to take a separate Round profile cylinder.</p> <p>A comparable alternative to a 3 Star TS 007 cylinder is one 'approved' by Sold Secure as meeting the Diamond level of BS 3621.</p>

Table 2: Guide to codes used in Table 1

SOLD APPROVED SECURE PRODUCTS

Sold Secure provides test and assessment services of effective security products to commercial customers, the insurance industry, the Home Office, the Police and the public.

Sold Secure is a company dedicated to reducing the risk of theft by the assessment of security products. Established in 1992 by Northumbria and Essex Police with the help and backing of the Home Office, it is now administered by the Master Locksmiths Association.

The scheme has close ties with a number of constabularies and insurers who provide regular information regarding the methods of theft and the tools utilised by criminals in their area. This helps to maintain an up to date specification and means security products can be assessed in the light of the risk they are likely to encounter when in use.

Manufacturers and suppliers can apply to have their products approved by Sold Secure. Products which have been satisfactorily assessed may bear the Sold Secure Quality Mark. Information on these approved products is circulated by Sold Secure to crime reduction officers, insurance companies, the media, the Home Office and the public, and is available free to those who request it.

The Approved Product list gives the reader an insight into the more effective security products, it does not give any form of guarantee that these products will be 100% effective in combating crime. Also, it does not guarantee that these methods are suitable for specific applications. It is the responsibility of the equipment supplier and equipment purchaser to ensure that any system is suitable to its particular application and that it complies with all legislation, standards, codes of practice or any other requirement. Every effort has been made to ensure the contents of the list are accurate, however Sold Secure does not accept any responsibility for loss arising from decisions based upon it or the loss of any property which was protected by a security device bearing the Sold Secure logo.

For updates to this list see our web site at www.soldsecure.com

- Bronze products offer a good level of resistance against the opportunist thief and should be used in a normal risk environment.
- Silver products offer a greater level of resistance against the more determined thief and should be used in a higher risk environment.
- Gold products offer our top level of resistance against the dedicated thief and should be used in a high risk environment.
 - The Diamond level is a specific extra-high security grade for portable wheel locks for the caravan market, for tracking systems and for lock cylinders.

The Protector 11mm chain is a versatile long-link design made from high grade hardened boron steel bar, and is highly resistant to sawing/cutting, cropping and hammering attacks. The long link design means it is lighter than many competing chains of similar or even smaller gauge. International standard European steel with top-grade British heat treatment and finishing. It is bright zinc plated and de-embrittled for maximum longevity and is supplied with a tough sleeve to protect your valuables. **Sold Secure and also Police Secured-by-Design approved.** Not as tough as the 13/16/19mm chains but much more portable and easier to handle. Recommended for medium value bicycles and similar applications, including as a carry chain; not recommended for motorbike use.

Locking Bar

Pragmasis Ltd

Anti-Pinch Pin

Tel: 01827 286267

Web: www.securityforbikes.com

The Anti-Pinch Pin is a dead simple idea that seeks to address the common problem of people being unable to route a decent-sized chain through a lot of modern motorbikes and other valuable objects. Hence many people either put the chain round the wheel, and obviously wheels can be removed and the bike can then be stolen, or they don't bother with a chain at all (and the whole bike gets removed...).

Rather than needing space to take the chain, the Anti-Pinch Pin is like a giant drawing pin or rivet and only the pin part of it, a 23mm diameter hardened steel bar, needs to go through the bike. It acts like a chain extender. You loop the chain onto one or both ends of the Pin, with a Squire SS65CS padlock clamping sideways onto a recess at the non-headed end of the Pin. There is a large head at the other end of the Pin, preventing the chain from dropping off and/or the Pin being pulled through the bike.

This idea works even better on certain bikes that have large hollow rear axles: If the hole through the axle is big enough to take a broomhandle, it'll probably be perfect for the Anti-Pinch Pin to achieve a structural tether at the back of the bike, and you then get the advantage of using a shorter chain that is cheaper and easier to handle!

Sold Secure and also Police Secured-by-Design approved. It is guaranteed *impossible* to bolt-crop by hand (even with 42" croppers) and at 23mm thick it is extremely resistant to sawing/cutting and hammering attacks. It is an ideal partner for the Protector 16mm and 19mm chains.

Supplied in a range of lengths to suit different bikes. Bright zinc plated and deembrittled. CNC machined. British Made.

Pragmasis Ltd

Torc Ground Anchor Series 2

Tel: 01827 286267

Web: www.securityforbikes.com

The Torc Ground Anchor is Sold Secure Gold in all categories, making it the highest-rated ground anchor on the market. It is also Police Secured-by-Design approved. It can be fitted easily with DIY tools and uses four high-tensile anti-tamper fixings for maximum strength in a variety of situations.

The shackle is made from 20mm diameter hardened steel and forms a complete 'D'. This means that a thief would have to cut it twice in order to defeat it—that's two cuts through 20mm hardened steel, more even than the thickest chains! It folds flat, which keeps it out of your way, but makes it harder for thieves to attack. The Torc anchor is easy to use with even the largest (16mm and 19mm) chains and can be fitted to an existing concrete floor, brick or block wall or in a van/bike safe, or it can be embedded when laying fresh concrete. It is the only ground anchor offered with such a wide choice of fitting kits, helping to give the best fixing in a wide variety of different situations. It has two-stage corrosion protection with a zinc pre-treatment and tough powder coating finish so it can be used outdoors. It is British Made and supplied with easy-to-follow fitting instructions.

Pragmasis Ltd

Double Doofer Removable Ground Anchor

Tel: 01827 286267

Web: www.securityforbikes.com

The Double Doofer two-part anchor is removable and is therefore ideal in situations where you will be moving house or are in rented or temporary accommodation. It is the **only Sold Secure-approved removable anchor**. Similarly, it is the only removable anchor that is **Police Secured-by-Design approved**.

It comprises a base and a separate hardened steel cover that conceals the fixings. The base and cover each have large D-shaped bridge pieces that engage with each other when assembled. The cover is held in place by a suitable chain being locked through the combination of both D-shaped bridges. The closeness of the fit of the chain through the anchor is critical to the security of the anchor so it is supplied with Doofer-Daptor adaptor plates to give adjustment of the space, as well as comprehensive instructions. It is also corrosion-protected and British Made.

Velotrove Ltd VeloChain

Tel: 0845 548 8350
Web: www.velotrove.com

The ultimate ground anchor with integral chain, the VELOCHAIN offers exceptional security. Compact and stylish, it is the simple way to secure your bike in your home, on a balcony, in a shed or garage or on the street.

The VELOCHAIN consists of a hardened steel chain encased in a PVC hose that is anchored to the ground. The bike is secured using the cyclist's own bike lock.

The VELOCHAIN is the only ground anchor you can lock your bike to directly with a D-lock. There is no need to use an additional chain or to bend down to the ground – making it easier to lock your bike securely and comfortably. There are no metal bits to scratch your bike and no fabric to get wet.

The VELOCHAIN makes it easy to lock your bike through the frame and wheel together and not just the wheel so ensuring a much higher level of security and in accordance with police guidelines.

The VELOCHAIN is suitable for up to two bikes and is accredited to the Sold Secure Gold rating. It can be used in conjunction with the VELOTROVE or VELOPLANTER or as an independent item to secure bikes or tools.

HS1 Hasp & Staple

Tel: 01827 286267

Email: www.securityforbikes.com

The HS1 heavy duty hasp and staple is fully hardened and is **CEN 4 rated, Sold Secure approved and Police Secured-by-Design approved**. Made from 5mm thick and 12mm thick welded and hardened plates and with **fixings that are concealed and bolted-through on both hasp and staple sides**. There is a choice of 6 fixing holes for each side, giving 12 mounting hole options altogether, of which 8 holes are normally used with the bolts provided. This offers compatibility with a wide range of shed and door designs. The hardened steel eye on the staple is 12mm thick with a 15mm diameter opening to accommodate high-security padlocks, including closed shackle locks. Corrosion-protected and British Made. Easy DIY fit with drill bit, eight M8 coach bolt fixings (various lengths available) and comprehensive instructions included.

Domestic Security	✓		

**Pragmasis Ltd
Shed Shackle**

Tel: 01827 286267
Web: www.securityforbikes.com

The Shed Shackle is a unique product that improves security for wooden sheds and is particularly suitable for securing bicycles. The Shed Shackle reinforces such a large area of the wall of the shed so that it becomes a viable anchoring point. Unlike a conventional ground anchor, the Shed Shackle doesn't require a heavy concrete floor to the shed and actually improves the strength of the woodwork - your shed becomes steel reinforced! It is also at an ideal height to secure bicycles and helps to keep chains etc off the floor, making the security easier to use and at the same time harder to attack for the thief! **Sold Secure and also Police Secured-by-Design approved.** Popular with building developers following the Code for Sustainable Homes. **Also available for metal bike sheds/bike huts and similar sheet steel structures.** British made. Zinc phosphated and powder coated for corrosion resistance. Modular and versatile design. Easy DIY fit with drill bit, eight M8 bolt fixings (various lengths available) and comprehensive instructions included.
